# oXIGEN
SLOT.IT DIGITAL

The *OXIGEN* universal SCP-1 radio interface
Turn your SCP-1 into a wireless controller for any system

Slot.it introduces a revolutionary **oXigen** addition to the **SCP-1** controller: the universal 2.4GHz radio interface for **SCP-1** cartridges.

This pocket size receiver plugs right into any **SCP-1** cartridge, regardless of polarity and type (works for analog and digital).

It connects by 2.4GHz radio link to the **oXigen** cartridge which is plugged into the controller, and transmits in real time the power, brake and any other commands (lane change, lights, etc) coming from the controller to the cartridge, thus creating a wireless, remote control **SCP-1** for all the **SCP-1** supported systems: analog (common ground or common positive), and digital (Hornby, Carrera, Ninco, SCX).

*…and of course it is the same **oXigen** cartridge which is used inside an **oXigen** system as well.*
Available during 2010
